PROFESSIONAL SUMMARY

Accomplished Senior Software Engineer with over 5 years of expertise in full-stack development, adept in Python, JavaScript, TypeScript, and React. Proficient in designing and implementing microservices architecture and RESTful APIs, with extensive experience in Node.js, SQL, and cloud platforms. Demonstrated leadership in driving projects to completion using agile methodologies, enhancing system performance, and ensuring robust DevOps practices including Docker, Git, and CI/CD pipelines. Proven ability to optimize applications for scalability and security, contributing to significant improvements in system efficiency and reliability.

PROFESSIONAL EXPERIENCE

Full Stack Developer at StartupXYZ
March 2020 - December 2021

- Engineered and scaled high-quality web applications leveraging React and Node.js in line with modern software development practices.
- Collaborated with UX designers to craft intuitive user interfaces and implemented robust database schemas using SQL, enhancing system efficiency and user experience.
- Developed a scalable customer portal with React and Node.js, successfully supporting over 50,000 active users and ensuring high availability and optimal performance.
- Enhanced application efficiency by 30% through strategic improvements in code and system architecture, and reduced bug reports by 50% by implementing rigorous testing protocols and continuous integration/continuous deployment (CI/CD) pipelines.

Senior Software Engineer at TechCorp Inc.
January 2022 - Present

- Spearheaded the development and scaling of a robust microservices architecture, enhancing system efficiency for over 1 million users using modern technologies such as Node.js and Python.
- Collaborated closely with product managers to meticulously define and implement technical requirements, ensuring the delivery of high-quality software solutions that align with business goals.
- Achieved a 40% reduction in API response times by optimizing existing code and integrating advanced features of RESTful APIs, significantly improving user experience.
- Successfully implemented a comprehensive CI/CD pipeline using Docker and Git, which slashed deployment times by 60% and bolstered team productivity and system reliability.

Junior Developer at Digital Solutions Ltd.
June 2019 - February 2020

- Engineered and deployed scalable features for a high-traffic e-commerce platform using JavaScript and React, adhering to best practices in modern web application development.
- Collaborated in a cross-functional team to design and implement robust solutions for data handling and functionality improvements, utilizing Python and Node.js within a microservices architecture.
- Developed and integrated a secure payment system using Python, enhancing transaction capabilities and improving user satisfaction.
- Optimized web application performance, achieving a 25% reduction in page load times through efficient code revisions and leveraging advanced SQL database techniques.

SKILLS

Technical Skills:

Python (intermediate), JavaScript (intermediate), React (intermediate), Node.js (intermediate), PostgreSQL (intermediate), Docker (intermediate), Git (intermediate), TypeScript (intermediate), GraphQL (intermediate), AWS (intermediate), Django (intermediate), REST APIs (intermediate), microservices architecture (intermediate), RESTful APIs (intermediate), database design (intermediate)

Soft Skills:

Agile Development (intermediate), Leadership (intermediate), Problem Solving (intermediate), Team Collaboration (intermediate), Communication (intermediate), Project Management (intermediate)

EDUCATION

Bachelor of Science in Computer Science
University of Technology | May 2019
